## Online Backup & Recovery Service

Horizon Info Services' online backup solution provides reliable, secure, and automatic online backup and recovery for businesses.

Eliminate reliance on failure-prone tape backup by making the quick and easy switch to Horizon Info Services' online backup solution. Ensure Disaster Recovery readiness by enjoying one-step backup and offsite storage. Free-up IT resources and administrator time with hardware-free, maintenance-free online backup from Horizon Info Services.

### Quick & Easy Setup

Software agents are installed on selected servers, desktops, or laptops. The centralized interface is then installed on a workstation to configure agents with retentions, backup sets, and other settings. Next, a full backup is performed via internet or via a portable disk drive.

### Fast Backups

Following the initial full backup, only changed data is detected, compressed, and encrypted before being pushed outbound and secured in our world-class datacenters. Horizon's online backup service combines state-of-the-art infrastructure, redundant bandwidth, compression, and other techniques to ensure the fastest backups.

### Simple Management

Horizon's online backup service is truly a "set it and forget it" solution. Once you configure your backup sets and retention settings, your backups are performed automatically moving forward. Email notifications are triggered to confirm backup success, so you can be confident in your data protection plan - even without actively managing it.

### Secure Backups

In-flight and at-rest, data remains encrypted at all times. Our clients have the only decryption key; we have no back-door access or ability to decrypt your data.

### Secure Infrastructure

Data is stored on industry-leading disk arrays in our world-class datacenter. Premium safeguards protect your data, including the redundancy of telecommunication, power, and security equipment. 24-hour facility monitoring and security, climate controls, advanced fire suppression systems, multiple tiers of firewall and network perimeter defense, and 24/7 vault and bandwidth monitoring are all standard. Our datacenters and vaults operate in a "high availability" configuration so you will always have access to your data.

### Online Backup

- » Fast Backups
- » Total Automation
- » End-to-End Encryption & Security
- » Quick & Easy to Setup & Manage
- » Immediate Online Restores
- » Fast, Proven Disaster Recovery

### The Importance of Disaster Recovery

20% of SMBs suffer a major disaster every five years.

Source: RichmondHouse Group

65% of SMBs do not have a disaster recovery plan.

Source: The Gartner Group

# Key Features

## Immediate Online Restores

Restore files easily via a simple wizard in a matter of seconds.

## Granular Exchange Backup

Specific application integration assures proper backup and fast recovery for Exchange, including message-level detail.

## Accelerated Disaster Recovery

Since we manage a fleet of portable disk drives, we can overnight your data for a full disaster recovery if required. Our portable disk drives are the safest way to transfer large data sets for recovery since your last remaining copy of data is not put on the road (as is common with tape and courier solutions) should you suffer a disaster.

## Ensured Compliance

Built-in access controls, audit logs, and in infrastructure backed by a SAS 70 Type II audit help facilitate regulatory compliance.

## Wide Support

High performance data protection is delivered to simple networks or complex enterprise environments, with support for Windows, Unix, Linux, Netware, and IBM i. VMware and Sharepoint are fully supported as well.

## Integrity Verification

A "digital handshake" ensures that data sent is equivalent to the data received. If any errors are detected, a notification will be triggered to alert the administrator.

## Central Management

Simplify backup management by controlling multiple backup jobs from multiple machines from one centralized location.

## Advantages of Online Backup

- » Fastest Implementation
- » Pay as You Go - No Large Up-Front Costs
- » One-Step Backup & Disaster Recovery Readiness
- » Most Secure Solution
- » Free-up IT Resources & Time
- » Restore Data from Anywhere at Any Time
- » Premium Infrastructure
- » Reduce Complexity of On-Premise Infrastructure

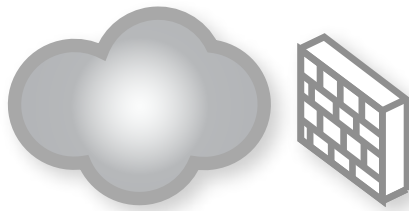

## Did You Know...?

93% of companies that suffer a significant data loss are out of business within 5 years.
